Academic Projects

Title : Handwritten Digit Recognizer

Platform : Java

Description : The handwritten digit recognition is the capability of computer applications to recognize the human handwritten digits. It is a hard task for the machine because handwritten digits are not perfect and can be made with many different shapes and sizes. The handwritten digit recognition system is a way to tackle this problem which uses the image of a digit and recognizes the digit present in the image.

Title : Expense Tracker

Platform : JavaScript

Description : This Expense Tracker in JavaScript is a simple personal account diary like system. The whole programming is in HTML, CSS, and JavaScript. This project will help the users to keep track of their expenses and income properly.

Title : E-Commerce Website
